VIDEO REPORT

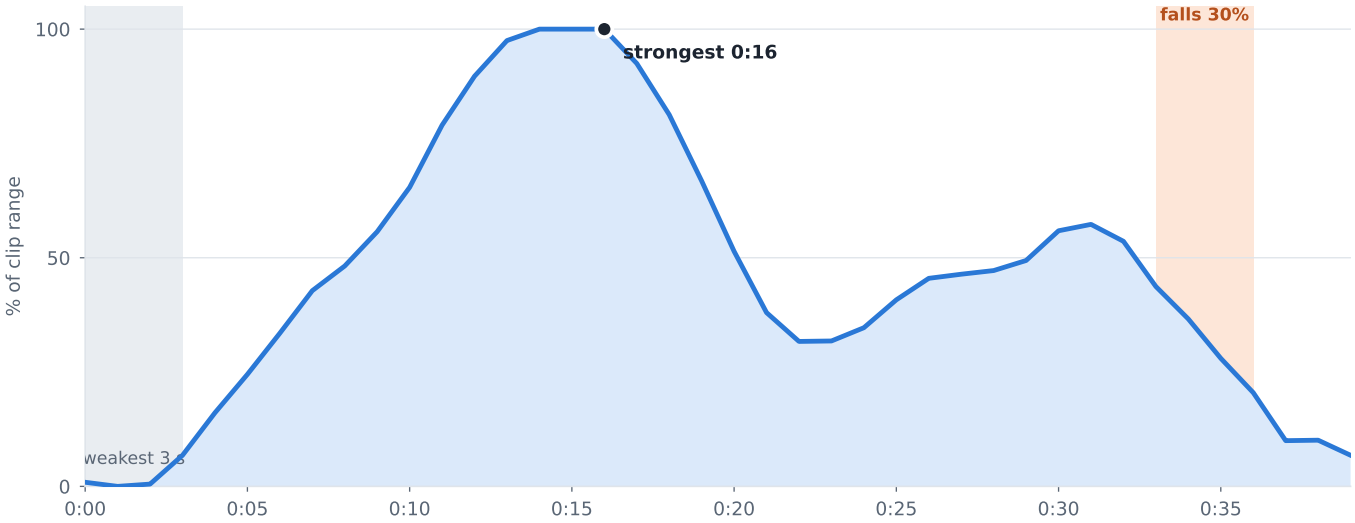

The Star Builds 4 Bridges! Which One Is Strongest? #Shorts

STRONGEST SECOND	STEEPEST FALL	WEAKEST 3 SECONDS	AVERAGE LEVEL
0:16	**30%**	**0:00 to 0:03**	**46%**
after the first three seconds	0:33 to 0:36	lowest stretch of the curve	of this clip's own range

Predicted response across the video

Each point is one second. The scale is this clip's own range: 0 is its lowest second, 100 its highest.

What the model predicts

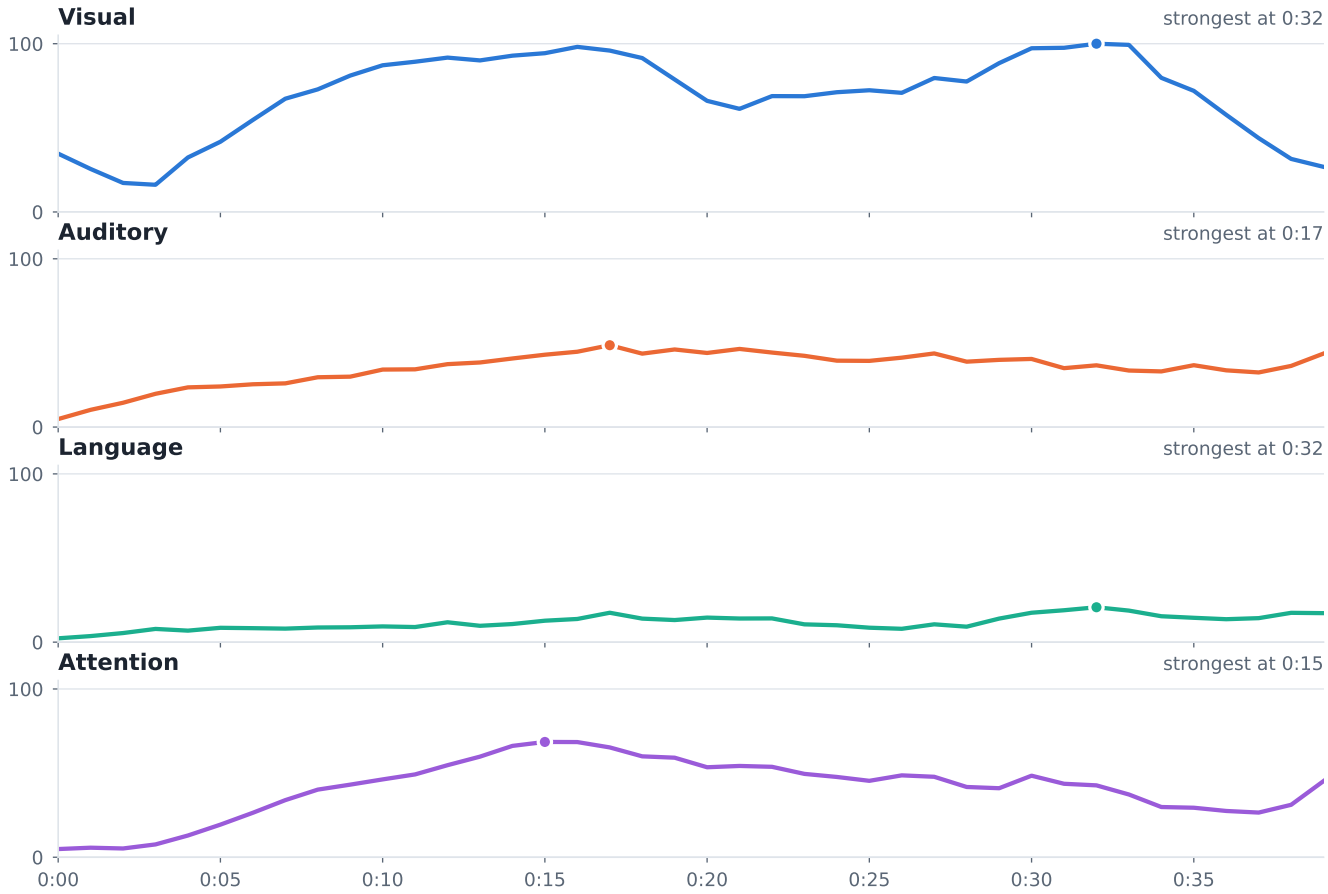

- After the first three seconds, the predicted brain response peaks at 0:16, the predicted response falls 30% between 0:33 and 0:36, and the weakest 3-second stretch is 0:00 to 0:03.
- After the fall at 0:36 the predicted response never gets back above 70% of its pre-fall level (best at 0:39); the clip's strongest moment stays 0:16.
- The visual network has the highest predicted response for 92% of the clip, the auditory network for 5%.
- Speech is present in 20% of the seconds; the words are set against the curve on the later pages.

In this report

Brain networks: which of the four networks leads, and when
Key moments: the seconds worth a close look, with the frame and the words
Every second: level, leading network, most active regions and words
How to read this report: what each number is and what it is not

Brain networks

The model's cortical prediction is summarised as four networks. Each panel is scaled to that network's own range within this clip, so compare the shape and the timing of the panels, not their heights.

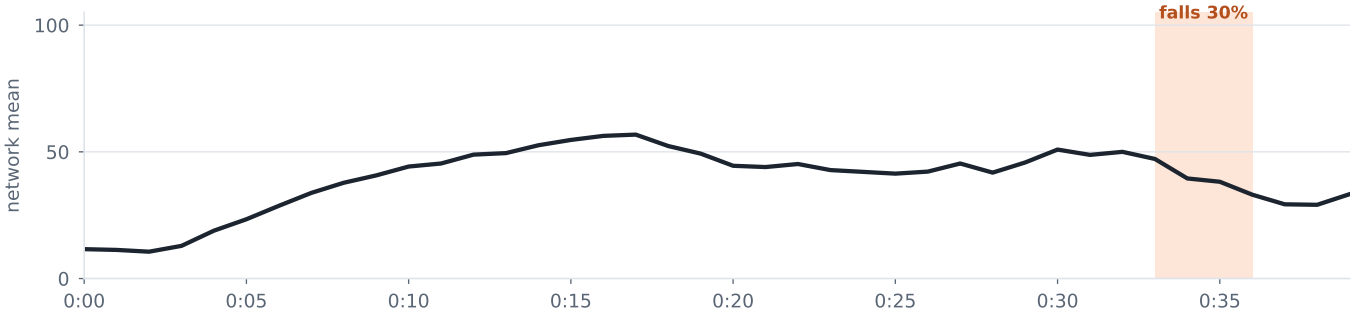

Leading network, second by second

NETWORK	LEADS FOR	SHARE OF THE CLIP	ITS STRONGEST SECOND
Visual	37 s	92%	0:32
Auditory	2 s	5%	0:17
Attention	1 s	2%	0:15
Language	0 s	0%	0:32

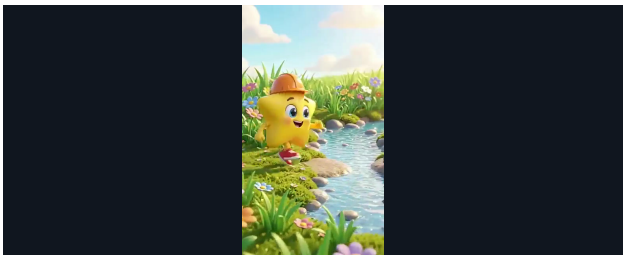

Mean of the four networks

This is the one series a percentage change is taken on, because it is not stretched to fill the chart. A fall is reported only when it starts at or above the clip average and loses 20% or more within three seconds.

Key moments

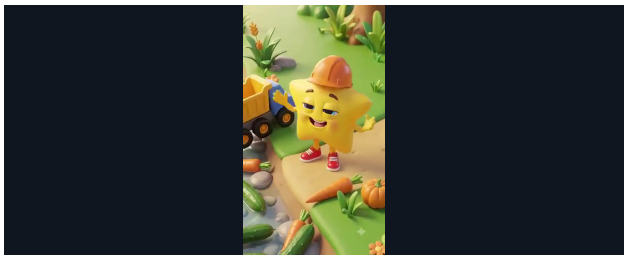

The seconds that define this video's predicted response. Levels are on the clip's own 0 to 100 range.

0:00 Opening, Weakest 3 s begin

1 of 100

Leading network	Visual
System	Objects & color
Regions	Higher visual: color + face/object patches; Color & form processing

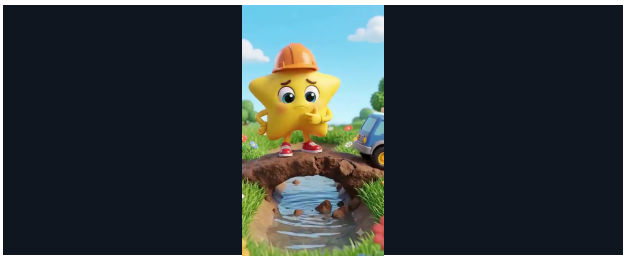

0:16 Strongest second

100 of 100

Leading network	Visual
System	Motion tracking (V5/MT)
Regions	Motion-related; Upper visual field area

“fell into the stream carrots pumpkins green cukes to roll away what can I do dirt and soil”

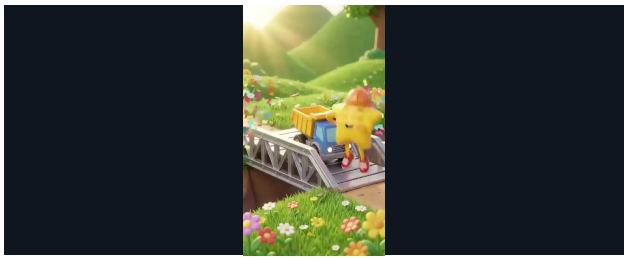

0:22 Local low

32 of 100

Leading network	Visual
System	Early visual cortex
Regions	Upper visual field area; Higher visual: color + face/object patches

“piled up high crumble crumble oh my oh my now Now I know just what to do.”

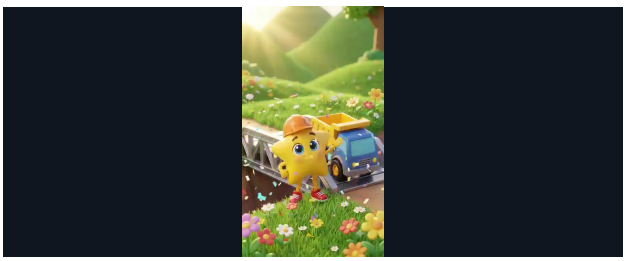

0:33 Fall begins

44 of 100

Leading network	Visual
System	Scene & place recognition
Regions	Ventro-medial visual (scene); Dorsal visual V3B

“We made it.”

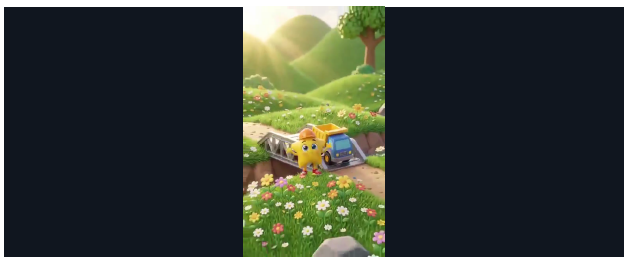

0:36 Fall ends

20 of 100

Leading network	Visual
System	Motion tracking (V5/MT)
Regions	Motion-related; Color & form processing

“Hip, hip, hooray. Our metal bridge saved the day.”

0:39 Best after the fall, Final second

7 of 100

Leading network	Attention
System	Salience / control
Regions	Anterior cingulate (monitoring); Peripheral/retinotopic vision

Every second

One row per second. Level is the position on the clip's own 0 to 100 range. The strongest second is marked with a dot; rows inside the steepest fall are tinted. Words are listed at the second their line starts.

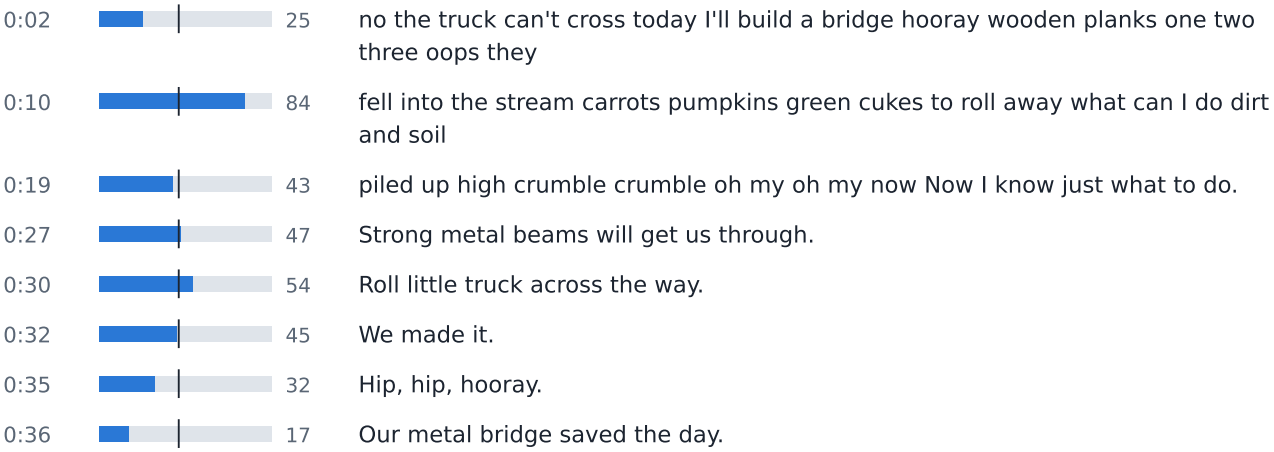

TIME	LEVEL	NETWORK	MOST ACTIVE REGIONS	WORDS	CONFID.
0:00	1	Visual	Higher visual: color + face/object patches; Color & form processing		medium
0:01	0	Visual	Higher visual: color + face/object patches; Color & form processing	*no the truck can't cross today I'll build a bridge hooray wooden planks one two three oops they*	medium
0:02	0	Visual	Lateral belt (secondary auditory); Posterior belt (secondary auditory)		lower
0:03	7	Auditory	Lateral belt (secondary auditory); Auditory area 5 (superior temporal)		medium
0:04	16	Visual	Lateral belt (secondary auditory); Posterior belt (secondary auditory)		medium
0:05	24	Visual	Higher visual: color + face/object patches; Auditory area 5 (superior temporal)		medium
0:06	34	Visual	Higher visual: color + face/object patches; Ventro-medial visual (scene)		medium
0:07	43	Visual	Ventro-medial visual (scene); Higher visual: color + face/object patches		medium
0:08	48	Visual	Ventro-medial visual (scene); Upper visual field area		medium
0:09	56	Visual	Higher visual: color + face/object patches; Upper visual field area	*fell into the stream carrots pumpkins green cukes to roll away what can I do dirt and soil*	medium
0:10	65	Visual	Higher visual: color + face/object patches; Color & form processing		medium
0:11	79	Visual	Upper visual field area; Motion-related		medium
0:12	90	Visual	Upper visual field area; Motion-related		medium
0:13	98	Visual	Upper visual field area; Motion-related		medium
0:14	100	Visual	Upper visual field area; Motion-related		medium
0:15	100	Visual	Upper visual field area; Motion-related		medium
0:16	100 ●	Visual	Motion-related; Upper visual field area		medium
0:17	92	Visual	Motion-related; Upper visual field area		medium
0:18	81	Visual	Motion-related; Upper visual field area		medium
0:19	67	Visual	Motion-related; Temporo-occipital visual (objects)	*piled up high crumble crumble oh my oh my now Now I know just what to do.*	medium
0:20	51	Visual	Temporo-occipital visual (objects); Motion-related		medium
0:21	38	Visual	Temporo-occipital visual (objects); Motion-related		medium
0:22	32	Visual	Upper visual field area; Higher visual: color + face/object patches		medium
0:23	32	Visual	Upper visual field area; Dorsal visual V3B		medium
0:24	35	Visual	Upper visual field area; Temporo-occipital visual (objects)		medium
0:25	41	Visual	Upper visual field area; Higher visual: color + face/object patches		medium
0:26	46	Visual	Intraparietal sulcus (spatial attention); Ventro-medial visual (scene)	*Strong metal beams will get us through.*	lower
0:27	46	Visual	Ventro-medial visual (scene); Dorsal visual V3B		medium
0:28	47	Visual	Ventro-medial visual (scene); Higher visual: color + face/object patches		medium
0:29	49	Visual	Ventro-medial visual (scene); Dorsal visual V3B	*Roll little truck across the way.*	medium

Every second (continued)

TIME	LEVEL	NETWORK	MOST ACTIVE REGIONS	WORDS	CONFID.
0:30	56	Visual	Ventro-medial visual (scene); Dorsal visual V3B		medium
0:31	57	Visual	Ventro-medial visual (scene); Dorsal visual V3B		medium
0:32	54	Visual	Ventro-medial visual (scene); Dorsal visual V3B	*We made it.*	medium
0:33	44	Visual	Ventro-medial visual (scene); Dorsal visual V3B		medium
0:34	37	Visual	Ventro-medial visual (scene); Color & form processing	*Hip, hip, hooray.*	medium
0:35	28	Visual	Color & form processing; Higher visual: color + face/object patches	*Our metal bridge saved the day.*	medium
0:36	20	Visual	Motion-related; Color & form processing		medium
0:37	10	Visual	Motion-related; Posterior inferotemporal (objects)		medium
0:38	10	Auditory	Intraparietal (attention); Dorsal visual (reach / motion)		lower
0:39	7	Attention	Anterior cingulate (monitoring); Peripheral/retinotopic vision		lower

The words against the curve

Each spoken line with the average predicted level while it is said (clip range, 0 to 100). The clip average is 46; the tick on each bar marks it.

0:02	25	no the truck can't cross today I'll build a bridge hooray wooden planks one two three oops they
0:10	84	fell into the stream carrots pumpkins green cukes to roll away what can I do dirt and soil
0:19	43	piled up high crumble crumble oh my oh my now Now I know just what to do.
0:27	47	Strong metal beams will get us through.
0:30	54	Roll little truck across the way.
0:32	45	We made it.
0:35	32	Hip, hip, hooray.
0:36	17	Our metal bridge saved the day.

How to read this report

What the model is

v2neuro is a brain-encoding model. It was trained on fMRI recordings of people watching video, and for a new video it predicts the response of the cortex, one value per second, from the picture, the sound and the words. Nobody watched your video for this report.

Strongest second

The second with the highest predicted response, leaving aside the first three seconds. The cortex responds to any clip starting, so the opening would win on most videos and say nothing about yours.

Level, and "of this clip's own range"

Charts and bars use a 0 to 100 scale stretched to this clip: 0 is its lowest second and 100 its highest. It shows where a second sits inside this video. It cannot be compared between two videos, and a difference between two levels is not a percentage change.

Steepest fall

The largest fall within three seconds, as a true percentage of the level it falls from, taken on the mean of the four networks without stretching. It is reported only when it starts at or above the clip average and reaches 20%. When no window qualifies the report states no percentage.

Weakest stretch

The three consecutive seconds with the lowest average level (on a clip under 15 seconds, a fifth of its length, at least one second), never the strongest second itself. Every video has one; it is the place to look first, not a fault by itself.

Networks, systems and regions

The four networks (visual, auditory, language, attention) group the cortical surface. The leading network is the one with the highest value in that second, each on its own range. Regions are the atlas areas with the highest predicted response in that second.

Confidence

Higher, medium or lower says how well the model has been shown to predict the regions that lead in that second, and how typical the second is for it. It is a guide to how much weight a row can carry.

What this is not

These are predictions of an average cortical response. They are not a measurement of your viewers and they do not forecast views, watch time or sales. On recordings held out from training, the model's predictions correlate with the measured response at about r = 0.27 for material like its training set and about r = 0.12 for very different films. The useful test is your own data: compare these moments with the numbers you already have.
